

IntelliDisc™ - 3M Marker ultrasonically welded to polyethylene plate.

IntelliCap™ - Cut-away showing 3M Marker ultrasonically welded to polyethylene cap placed on pipe.

IntelliCap™ and IntelliDisc™

Available in Sizes 4" and 6"

The Smarter Solution for Locating Underground Utilities

With PlasticTrends, you can easily locate underground risers or municipal services through backfill, snow or overgrown vegetation up to five feet deep.

Plastic Trends' inexpensive and simple design allows you to save time, money, and eliminate wasted resources.

The IntelliCap™

Features a 3M disc marker that is ultrasonically welded under a polyethylene cap, which works on both DWV and sewer pipe. It is as simple as slipping it on top of the pipe end.

The IntelliDisc™

Features a 3M disc marker that is ultrasonically welded under a Plastic Trends' threaded plug which works on both DWV and sewer pipe.

Easy To Locate

Using the Electronic Marker Locator available through 3M, gives you the exact location of the marker using both a visual reading and a tone.
